BASIS OF ESTIMATE, ASSUMPTIONS & EXCLUSIONS — what the price relies on — carry these onto the proposal

Margin, not markup. Overhead is a cost, priced before profit. Profit is a share of the *price*: price = (cost + overhead) ÷ (1 – margin). A 15% markup on cost is only a 13% margin on price.

Internal pricing worksheet — the customer-facing number and the assumptions above go on your quote or bid proposal. Not accounting or tax advice: confirm the sales-tax treatment of materials for your state and contract.

Direct cost subtotal
Sales tax on materials (___%)
Contingency (___% of direct cost)
Total estimated cost
Overhead (___%)
Cost + overhead
Profit — ___% margin on price

Estimate total
